## MagFeeder

The MagFeeder is a new friction feeder for use on mail inserting and related equipment. It is a rugged machine designed to stand up to the most trying production environments. The MagFeeder's performance, reliability, and forms flexibility make the MagFeeder an important cost-saving tool in your production. The MagFeeder accommodates a wide range of insert sizes, from business cards through 6x9 and 9x12 envelope inserts. It efficiently separates and delivers Z-folds, double parallel folds, letter folds, cross folds, books, glossy stock, plastic cards, envelopes, and other direct marketing material.

The MagFeeder allows you to directly place material on flighted, and non-flighted conveyors or wrapper systems. Special features include remote triggering to feed material on demand, variable speed, and miss detection. Triggering can be accomplished by using a microswitch or photocell. Optional features include batch counting and the ability to skip one or more pockets while feeding.

**The MagFeeder supports:**

- Phillipsburg 6" x 9"
- Master Mailers
- Most vacuum fed inserters
- Conveyor transport systems
- Labeling Machines
- Stitching Machines

**Specifications:**

Electrical: 120 VAC, 1 Amp, 60 Hz

Insert size, 6x9 MagFeeder: Minimum 1-1/2"L x 2"W : Maximum 12" L x 9"W

Insert size, 9x12 MagFeeder: Maximum 11" Wide

Insert Thickness: Minimum .004" : Maximum 3/8"

Typical speed for 9x12 envelopes is 140 pieces/min.
